

Burkland Launches Dedicated Services for Clean Energy Startups
New specialty consulting area provides accounting expertise and strategic financial guidance

3/12/24

SAN FRANCISCO--[Burkland](#), a full-service fractional CFO, HR, accounting, and tax provider, today announces a new dedicated specialty practice team designed to meet the needs of startups in clean energy. Accounting and financial experts are helping these newly founded companies grow, with strategies tailored to their unique needs and requirements, such as guidance on how to navigate fundraising complexities and manage government grants.

Clean energy innovations are being supported currently by a major spike in funding, which includes government grants, venture capital investments, and private investments from names like Bill Gates. In particular, the Inflation Reduction Act of 2022, the CHIPS and Science Act, and the Infrastructure Investment and Jobs Act granted billions of dollars to agencies like the Department of Energy and the National Science Foundation for distribution across technologies that support sustainability.

"Many Burkland clients are hard at work innovating in clean energy, and several have already been recipients of government funds," said [Emily Felicelli](#), Burkland Clean Energy/Grant Accounting Division Lead. "Startups are researching many exciting new technologies, some of which would have been unthinkable just a few years ago. We're excited to support founders in this space, working on everything from growing food to producing energy to manufacturing goods."

Clients developing clean energy solutions include [Yard Stick PBC](#), working on soil carbon measurement technology, [Aether Fuels](#), innovating in sustainable fuels for aviation and ocean shipping, [Agrofocal](#), working to monitor crops with mountable technology, and [Tandem PV](#), further developing its Perovskite solar panels.

Additional clean energy focus areas for Burkland clients include:

- Affordable fusion power, inspired by nature
- Low-carbon laser manufacturing
- Alternatives for animal proteins
- Methane emissions monitoring

Burkland experts work with startups across a spectrum of industries, including SaaS, Healthcare, Consumer, Clean Energy, and Fintech, focusing on helping founders succeed. For

more information, founders should read "[The Smarter Startup](#)" blog, listen to the "[Startup Success](#)" podcast, and learn more about Burkland's [Clean Energy & Grant Accounting](#) services.
